NEWSLETTER LIFE APEX

ISSUE NO. 3 | SEPTEMBER 2019

FIRST RESULTS OF TIER 1

Telegram

- The first LIFE APEX results demonstrate the presence of environmental pollutants such as plant protection products, pain medication and industrial chemicals in apex predator & prey (AP&P) samples. Some of the chemicals were detected in species of direct trophic relation, which indicates bioaccumulation within the respective food webs
- As a next step we will create a List of TOP 100 APEX target substances, TOP 100 APEX NTS identified and TOP 100 APEX NTS tentatively identified, which we will use for further PBT-screening

and ranking

- Guidance has been established for sample contribution for Tier 2 and 3 since a questionnaire on existing quality assurance for sampling, processing and archiving of biota revealed great differences between Environmental Specimen Banks, Research Collections and Natural History Museums
- A questionnaire issued to institutions involved in chemicals regulations revealed a great interest in chemical monitoring data from apex predators

TOPIC 01

 Presentation of first analytical results and Life APEX online tools

TOPIC 02

Conferences:

- SETAC Europe
- ESB conference
- ICCE 2019
- CEST 2019

TOPIC 03

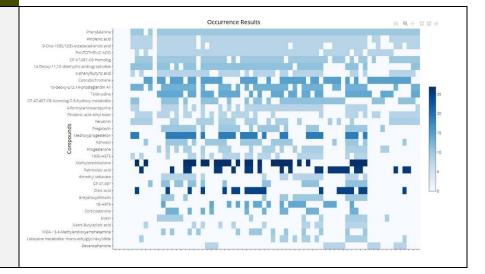

- Results of questionnaires on:
 Existing quality assurance
- Use of chemical monitoring data in chemical regulations
- Life APEX Dissemination

01: WIDE-SCOPE TARGET SCREENING OF 65 SAMPLES

01: ACCESS OF REPLICATION AND TRANSFER (R&T) PARTNERS

- Online access to Life APEX results for R&T Partners
- Selection of fragment number
- Modification of graph appearance
- Possibility of direct export

02: PRESENTATION OF LIFE APEX AT INTERNATIONAL CONFERENCES

SETAC Europe 29th Annual Meeting, Helsinki, 26-30 May 2019

• Presentation of LifeAPEX approaches with focus on the use of chemical monitoring data from apex predators for chemicals management

Jaroslav Slobodnik

5th International Conference on Environmental Specimen Banks (ESB), Stockholm, 3-5 June 2019

 Presentation of first Life APEX results with focus on the use of archived samples for chemical monitoring

Jan Koschorreck

17th International Conference on Chemistry and the Environment (ICCE), Thessaloniki, 16-20 June 2019

 Presentation of Life APEX results with focus on the chemical analysis

16th International Conference on Environmental Science and Technology (CEST), Rhodes; 04-07.09.2019

 Presentation on the determination of > 2,400 emerging contaminants in apex predators and their prey by novel and complementary high resolution mass spectrometry techniques

Maria-Christina Nika, Varvara Nikolopoulou, Georgios Gkotsis

Georgios Gkotsis

03: LIFE APEX DISSEMINATION

The <u>LIFE APEX Twitter account</u> is online and provides information on:

- project updates
- selected analytical results
- methods and approaches
- apex predators
- publications
- and upcoming events

LIFE APEX @LIFEAPEX1 The AIM of LIFE APEX is to improve systematic use of chemical monitoring data from apex predators and prey for protecting human health and the environment. @ Berlin, Germany & lifeapex.eu III Joined May 2019

3.1 Questionnaire on existing quality assurance for sampling, processing and archiving of biota samples

Issued by Fraunhofer IME to environmental specimen banks (ESBs), research collections (RCs) and natural history museums (NHMs)

 ESBs: Guidance documents on sampling/-processing Long-term experience in sample handling/trained experts for chemical monitoring Samples maintained in cold-chains RCs: 	LIFE APEX questionnaire on existing quality assurance for sampling, processing and archiving of animal samples for collections and specimen banks The aim of the LIFE APEX project is to improve the systematic use of chemical monitoring data from apex predators and prey (AP&P) for protecting human health and the environment. To gain acceptance by authorities, monitoring data need to be full documented and of high quality. This survey intends to gather information on the quality assurance measures applied for the sampling, processing and archiving of animal samples by Europe's Environmental Specimen Banks, Natural History Museums and other research collections. We would appreciate if you could answer the following questions and provide the applied protocols for the purpose of reviewing in this survey (e.g. by citing published information of giving links to internet resources).
 No guidance documents for sampling(opportunistic sampling) Partly guidance documents on sample processing Mostly experienced staff involved in sample processing for chemical monitoring 	 Derived indicators and minimum requirements for sample contribution: → Background information (date, location, age class, autolysis) → Information on archiving (cold-chain transport) → Description of sample processing
 No guidance documents for sampling/processing (opportunistic sampling) Less aware of potential contamination during sampling and processing 	 Are you interested in contributing samples for Tier 3? → Please ask for the Life APEX sample guidance document.

3.2 Questionnaire on the use of chemical monitoring data in support of chemicals regulation

lations

Issued by the German Environment Agency to institution	ns involved in chemicals reg	U
 Most of the participating institutions were European national competent authorities Chemical monitoring programs are often 	At which level/ in which function is yo regulation?	
conducted on a national or state basis	European competent authority)
 Other participants were part of research institutions, European competent authorities or industry 	National competent authority	
	Industry —4 (13.3%)	
	Research —7 (2	3.3%
	NGO -0 (0%)	

our institution involved in chemical

03: REGULATORY ADIVISORY BOARD (RAB) MEETING, JUNE 2019

Content of the Meeting:

- Presentation of the Life APEX objectives, actions, expected outcomes & timeline
 Presentation and discussion of project status, first results and data bases
- Discussion on the regulatory background
 & networking with key regulators

RAB Members:

- Assured their support during the course of the project
- Great interest in data bases and the fast visibility of data on the <u>Life APEX webpage</u> and the connection to other data bases such as IPCHEM

Future outline:

- Next meeting in Januar 2020
- Conference organised by UBA in 2020 for RAB Members and other regulators

Organisation of Life Apex

Project Partners

NTAL INSTITUT	Umwelt † Bundesamt	Naturalis Biodiversity Center	
Environmental Institute	German Environment Agency	Naturalis Biodiversity Center	National and Kapodistrian University of Athens
Fraunhofer	Centre Ecology NATURAL ENV	* HOUTH	
Fraunhofer Institute for Molecular Biology and Applied Ecology IME	Natural Environment Research Council		Università degli Studi di Firenze

IMPRINT

Project Coordinator

Jaroslav Slobodnik is the director of Environmental Institute. Among his specialisations are environmental

science-to-policy interactions, development of monitoring strategies and environmental analytical chemistry. He is frequently responsible for the design of environmental information and data management systems

Project Manager

Natalia Glowacka is the project manager of LIFE APEX. She got her PhD degree in

environmental management. She has more than five years of experience in the field of administration and management of national and international environmental projects in Environmental Institute.

Newsletter Editor

Alexander Badry is an early career researcher in the field of environmental toxicology. He is

working as research assistant at the German Environment Agency and is doing his Doctorate at the Leibniz Institute for Zoo and Wildlife Research on contaminants in birds of prey.
